Protecting the Planet

The Earth's ecosystem was more balanced, and natural resources were abundant. Human activities had less of an impact on the environment, and there was less pressure on resources. The world was characterized by vast forests, rich biodiversity, and clean air and water.

Population growth has had significant effects on the Earth, including increased pressure on natural resources, increased pollution, and the loss of habitats and biodiversity, deforestation, pollution, and increased greenhouse gas emissions. Before human population growth, the Earth's ecosystems and natural resources were able to regenerate and balance themselves, providing a sustainable environment for all living beings.

To minimize the depletion of resources, various measures can be taken, including reducing consumption levels, developing sustainable technologies and practices, promoting renewable energy sources, and adopting environmentally friendly production processes. For example, we can adopt renewable energy sources such as wind and solar, use public transportation or electric cars,

and implement efficient waste management systems. It is also important to promote population control measures such as family planning, education, and empowerment of women. Additionally, conservation efforts should be intensified, and ecosystems must be protected to preserve biodiversity.

We can take several steps to ensure that future generations learn the importance of protecting our planet. Education plays a critical role in creating awareness and understanding of environmental issues. We can incorporate environmental education into school curriculums and encourage individuals to take part in eco-friendly activities. Governments and organizations can promote environmental protection policies and initiatives, such as environmental campaigns and awareness programs. We can also lead by example by practicing sustainable behaviors, reducing our carbon footprint, and choosing eco-friendly products and services. By taking these actions, we can ensure that the coming generations inherit a healthy and sustainable planet. Governments, businesses, and communities need to adopt sustainable practices and set an example for the next generation.

In summary, population growth has had a significant impact on the environment and resources of the Earth. However, with sustainable practices, conservation efforts, and education, we can work towards minimizing the depletion of resources and protecting the planet for future generations.

Join the Movement: Earth Day 2023

On April 22, the world comes together to celebrate Earth Day, a day dedicated to bring awareness and promote actions on environmental challenges. It is important for students to understand the effects of their actions on the environment and to accept responsibility for their environmental transformations.

With warming temperatures, melting glaciers, and rising sea levels, the globe is currently experiencing a climate crisis. To decrease the effects of climate change and safeguard our world for future generations. We can all make minimal but meaningful progress toward sustainability this Earth Day by reducing energy use, preferring for public transportation or walking instead of driving, and using fewer plastics that are only used only.

Institutional fields like campuses, universities, schools have a significant impact on the development of a sustainable future. Those fields can pledge to decrease their ecological impacts, support sustainable development efforts, and also incorporate environmental learning into their educational programs.

Earth Day serves as an opportunity to remind that we have a duty to protect the environment and that we need to take action right away. Together, we can build greener and more sustainable future for ourselves and future generations.

Mother Earth

Known as Abya Yala, Pachamama, Tonantzin, Mother Earth. Mother Earth is recognized as a living being, characterized by being a unique, indivisible and self-regulated community of interrelated beings, which sustains, contains and reproduces the beings that they live in it.

Earth Day is an annual celebration that honours the achievements of the environmental movement and raises awareness of the need to protect Earth's natural resources for future generations. Earth Day is celebrated on April 22. Earth is our home, the home to our upcoming generations the home to all living beings such as humans, plants and animals.

Leo Tolstoy once said "one of the first conditions of happiness is the that link between men and nature shall never be broken "Nature teaches us that whatever we sow, we reap. Life is all about moving and growing. Only death should stop us from learning. Our mother nature teaches us to grow.

Mother earth has nourished us, sheltered us giving us air to breathe, fresh water to drink, food to eat and healing herbs to cure us when we are sick most importantly accepted us with love and open arms. We can give back by simply keeping our earth green we can reduce, reuse and recycle Cut down on what you throw away. Follow the three "R" s" to conserve natural resources and landfill space. The healthier our ecosystems are, the healthier the planet - and its people. Restoring our damaged ecosystems will help to end poverty, combat climate change and prevent mass extinction.

Let us celebrate Mother Earth not just today, but every single day! Let's make a promise to mother earth today: "I promise to never litter and instead recycle." "I promise to respect Mother Nature." "I promise to take good, good care of the Earth."

A Call to Action for Environmental Conservation

Every year on April 22nd, people from around the world come together to celebrate World Earth Day. This annual event serves as a reminder of the importance of environmental conservation and sustainability and encourages individuals and communities to take action to protect our planet.

World Earth Day began in 1970 as a grassroots movement in the United States, driven by the need to address growing concerns about pollution, deforestation, and other environmental issues. Today, it has become a global movement, with millions of people participating in various activities and initiatives to raise awareness and promote positive environmental actions.

One of the key messages of World Earth Day is the urgent need to address climate change. With increasing temperatures, melting ice caps, and extreme weather events, the impacts of climate change are becoming more evident and threatening our planet's ecosystems and human communities. World Earth Day calls for immediate and collective action to reduce greenhouse gas emissions, promote renewable energy, and adopt sustainable practices in our daily lives.

Another important aspect of World Earth Day is the promotion of biodiversity conservation. Our planet's rich biodiversity is crucial for maintaining healthy ecosystems,

providing food, medicine, and other resources, and supporting livelihoods for millions of people. World Earth Day encourages efforts to protect endangered species, conserve natural habitats, and promote sustainable agriculture and forestry practices.

World Earth Day also highlights the importance of reducing waste, conserving water, and promoting recycling and upcycling. It encourages individuals and communities to adopt sustainable consumption patterns, such as reducing single-use plastics, conserving energy, and practicing responsible waste management.

In conclusion, World Earth Day serves as a powerful reminder of the urgent need to take action to protect our planet and create a sustainable future for generations to come. It is a call to action for individuals, communities, governments, and organizations to come together and make a positive impact on the environment through awareness, education, and concrete actions. By working collectively, we can create a greener, healthier, and more sustainable planet for ourselves and future generations. Let us celebrate World Earth Day with renewed commitment and take steps towards a more sustainable and resilient world. Happy World Earth Day.

Articles from Faculties & Staff

Earth is Our Home!

Earth is our home, and we don't have another planet to go to. So Earth is of fundamental significance for mankind as it gives us a spot to make due, flourish, and create. Earth is likewise, apparently, a truly extraordinary spot known to man that has incredible biodiversity – both in plants and in animals.

Our planet is an amazing place but it needs our help to thrive, every year on April 22 is celebrated as the Earth Day. One can celebrate the Earth Day by different ways likely:

1. Planting the trees,
2. Turning of the lights,
3. Limiting our water uses,
4. Offering our time and being a volunteer to clean our surroundings,
5. Spreading the message to all about saving our Earth.

The more people do, the better the planet will be.

Ms. Rajeena Chettri
Well Being Officer – Student Affairs Department

Restore Our Earth!

The theme for World Earth Day 2023 is "Restore Our Earth." The focus is on restoring ecosystems that have been damaged by human activity, and finding solutions to the many environmental challenges we face. These challenges include climate change, deforestation, pollution, and the loss of biodiversity. One of the key messages of World Earth Day is that everyone can make a difference. Whether you are an individual, a community group, a business, or a government, there are actions you can take to reduce your impact on the environment and protect the planet for future generations.

Individuals can make a difference by adopting sustainable habits, such as reducing their use of single-use plastics, conserving energy, and choosing environmentally-friendly products. They can also support environmental organizations and initiatives by volunteering or making donations. Community groups can play an important role in raising awareness and promoting environmental action at the local level. They can organize events, campaigns, and initiatives that engage and educate people in their communities.

In conclusion, World Earth Day is an important event that reminds us of our responsibility to protect the planet. It is a day to reflect on the environmental challenges we face and the actions we can take to address them. By working together, we can create a more sustainable and resilient world for ourselves and future generations.

Cherishing our Earth: A call Action on Earth Day

On Earth Day, let us stop and see,
The world around us, so bright and free.
The beauty of nature, the colors so grand,
The richness of the soil, the warmth of the sand.

The Earth is our home, our only place,
We must take care of it with love and grace.
The trees, the birds, the ocean blue,
They all depend on us, and we on them too.

We must reduce our waste and pollution,
And focus on sustainable solutions.
The air we breathe, the water we drink,
They all need our attention, it's what we think.

Let's plant some trees, and clean the beach,
And learn from the lessons that nature can teach.
For the Earth is our mother, and we are her child,
Let's make her proud, and keep her wild.

So let us celebrate Earth Day,
And make a pledge to keep it this way.
For the world is beautiful, and it's our duty,
To protect it with love, and cherish its beauty.

Mr. Pushendra Thakur
Administration & Operations Executive – Student Affairs Department

On Earth Day we celebrate,
Our planet is so diverse and great.
From mountains high to oceans deep,
Our Earth is a treasure we must keep.

PLACEMENT FEEDBACK

FROM STUDENTS

Santoshi Bhujel

They are helpful and friendly to support us to get job.

Thank you.

Umme Habiba

I have had an amazing experience with the team. Being a business management student this internship is very useful for me as it helps me interact with more people and lets me be better at my job.

Thank you.

Bikesh Yakami

Had a good experience with the placement team. They helped me find a job and the process of on boarding was also very smooth.

Thank you.

Umesh Regmi

It was with help of the placement department that I got this job. It is going to help me a lot in learning about the hospitality industry.

Thank you.

Wangchhu Yolmo

I've waited a little bit longer i guess for a right designation and finally wait is over. Thanks to placement team.

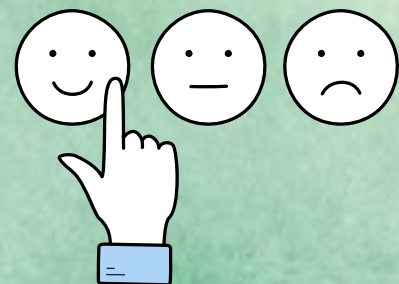

Thank you.

Rojesh Thapa

With the help of the placement team I could get a good internship opportunity with Dominos. I work there as a Pizza Expert and it has helped me to learn a lot about the food industry in Dubai.

Thank you.

FUN CORNER

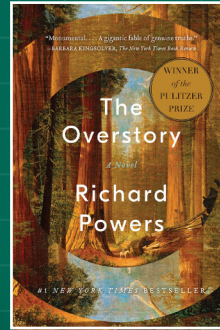

Fun Facts about Earth!

- Earth is not flat, but it's not perfectly round either.
- Our sun has a voracious appetite.
- There weren't always several continents.
- Earth's gravity isn't uniform.

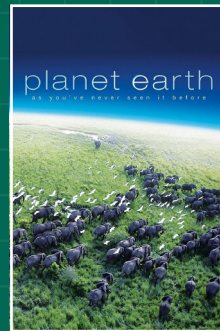

Recommendations!

The Overstory

This Pulitzer Prize-winning novel tells the story of how trees have lived silently alongside humans throughout history, focusing on nine people who have a range of unique experiences with trees in their lives.

Planet Earth

A documentary series on the wildlife found on Earth. Each episode covers a different habitat: deserts, mountains, deep oceans, shallow seas, forests, caves, polar regions, fresh water, plains and jungles. Narrated by David Attenborough.

What is Happening in UAE in May 2023?

Peter Pan on Ice

J M Barrie's well-loved story of Peter Pan takes to the ice at the Abu Dhabi Cultural Foundation, with breath-taking skating, flying & special effects - Peter Pan On Ice - The Imperial Ice Stars.

Laughter Show

The Selfdrive Laughter Factory's 'USA! USA!' Tour featuring the hilarious Mike Marino, Robby Slowik & Laura Frantz comes to Dubai from Wednesday 17 to Saturday 21 May 2023.
